

Pandora on Real Data

Steve Green & Leigh Whitehead

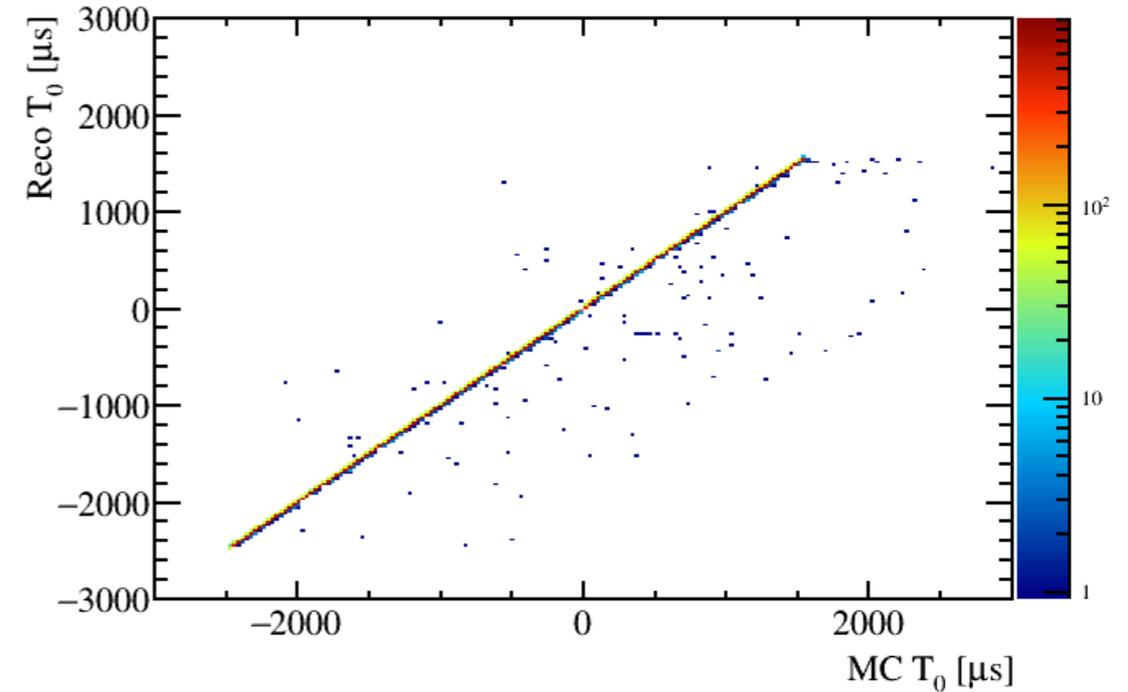

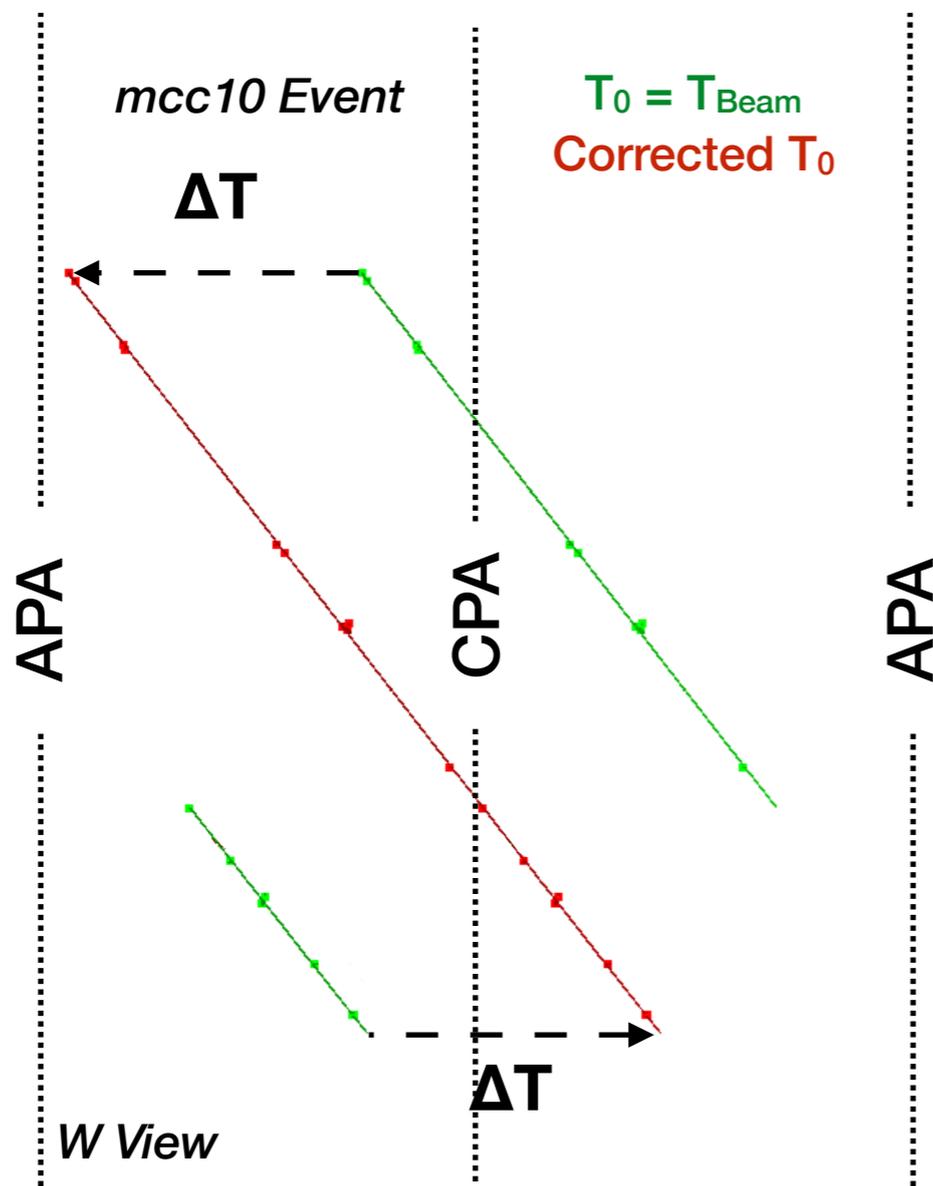

10th October 2018

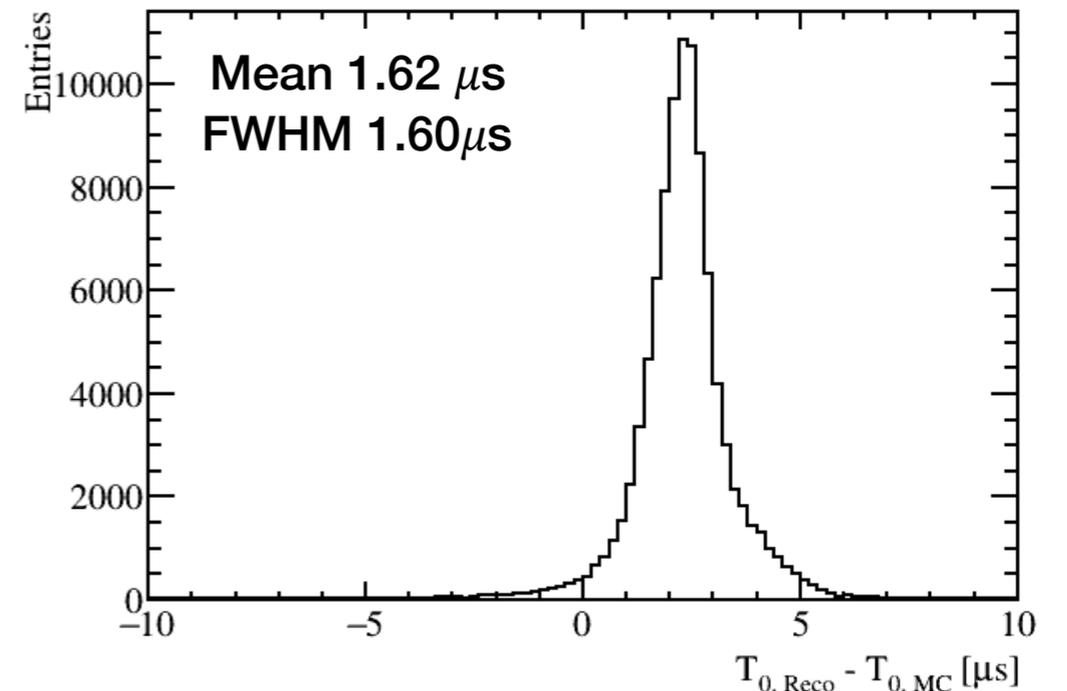

Recap: T_0 Reconstruction

- Pandora accurately “stitches” cosmic rays that pass through the cathode to determine the cosmic T_0 .
- T_0 accuracy is of the order of a few μs .

With Space Charge***

Stitching on Real Cosmic Data

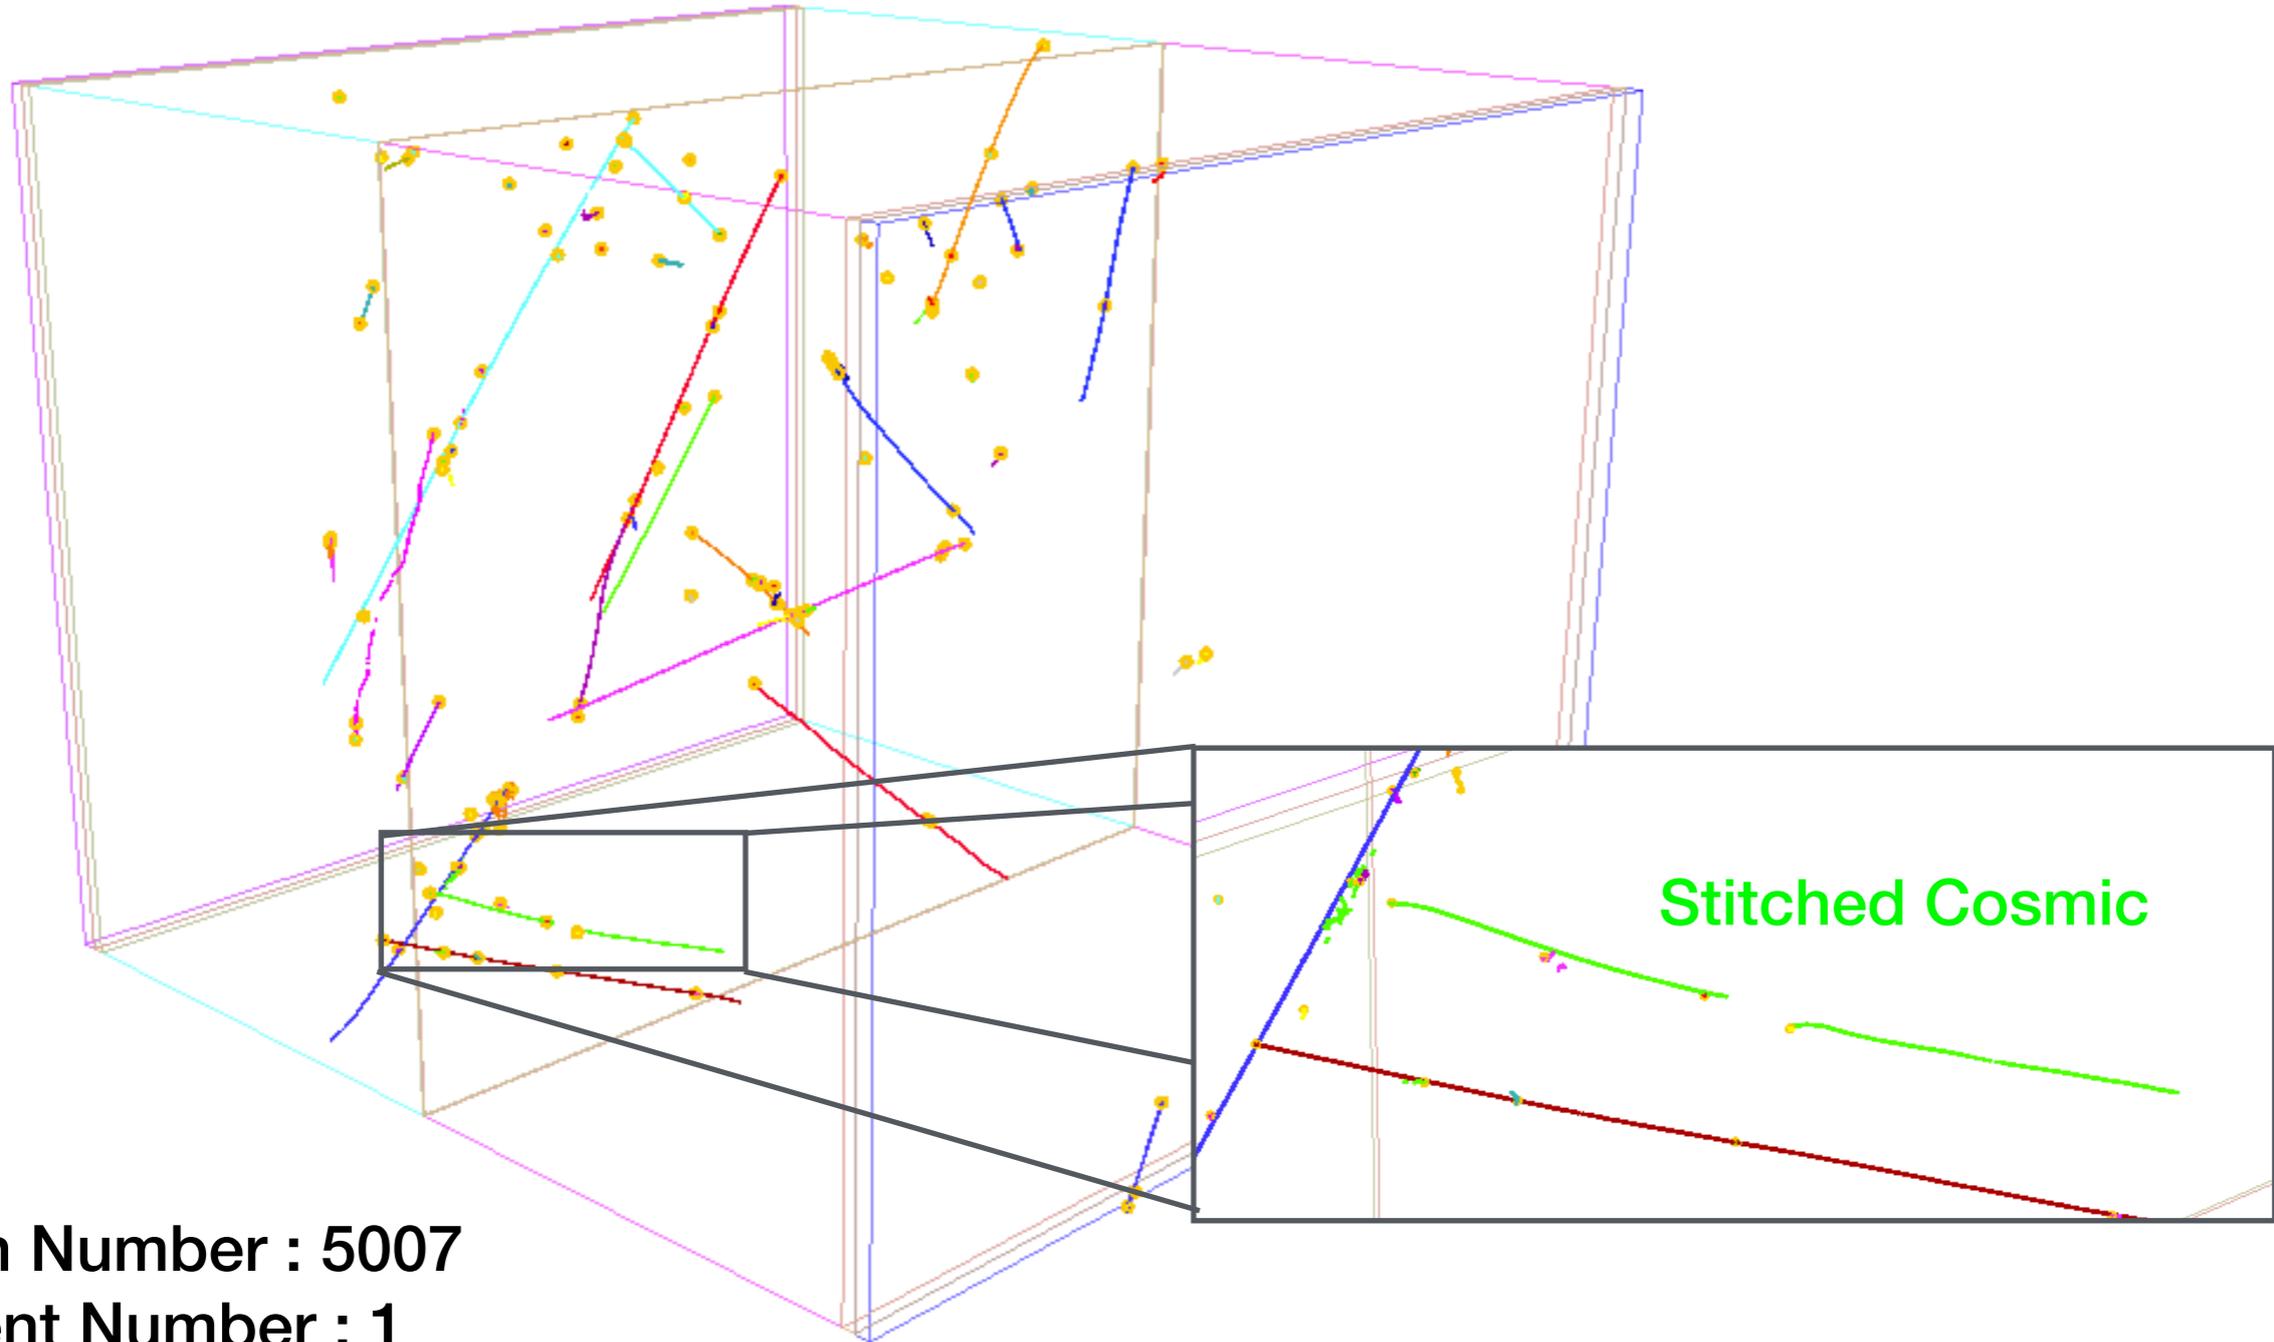

- The stitching process considered the longitudinal (X) and transverse (Z) separation of the clusters at their endpoints to determine if stitching should take place, as well as the relative angle (θ) of the clusters near their endpoint.

3D Pandora Reconstruction

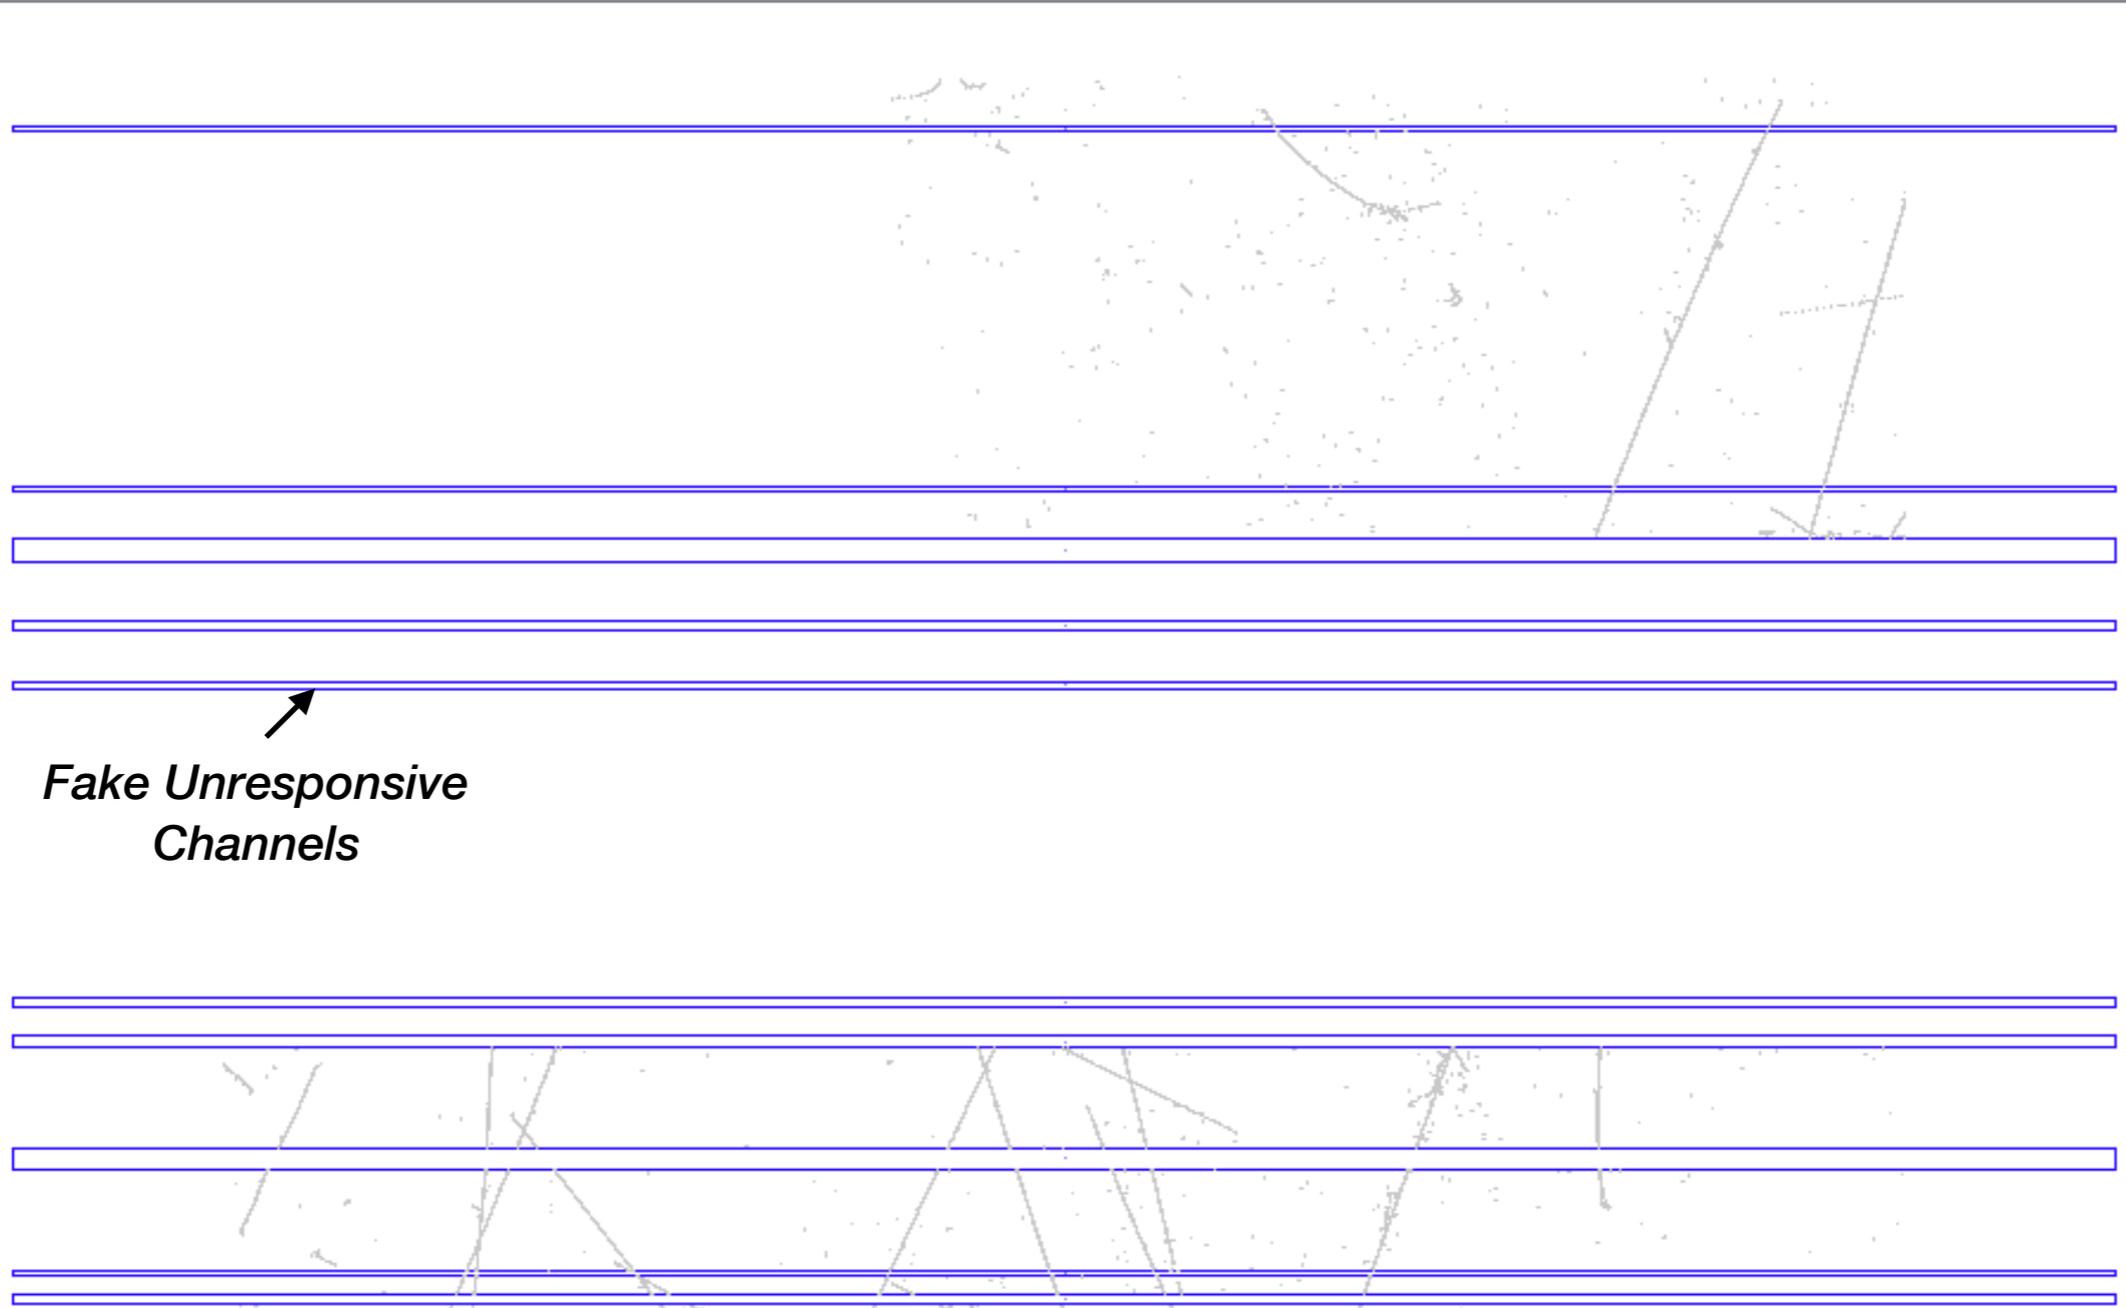

Run Number : 5007

Event Number : 1

W View

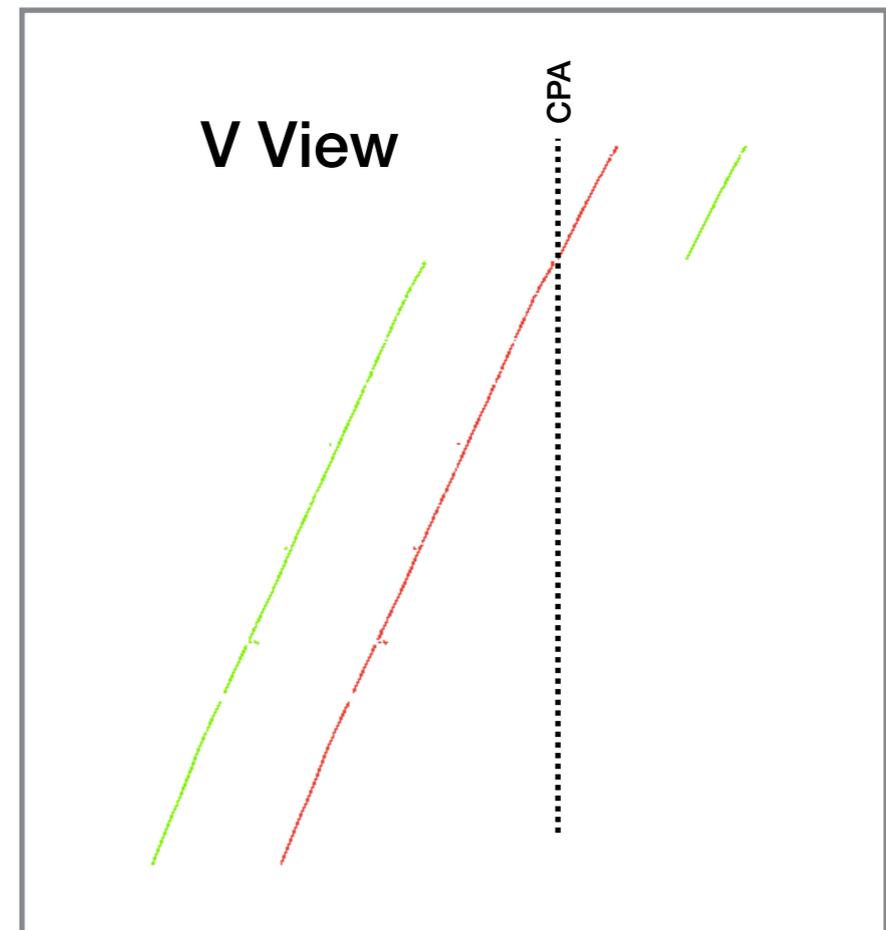

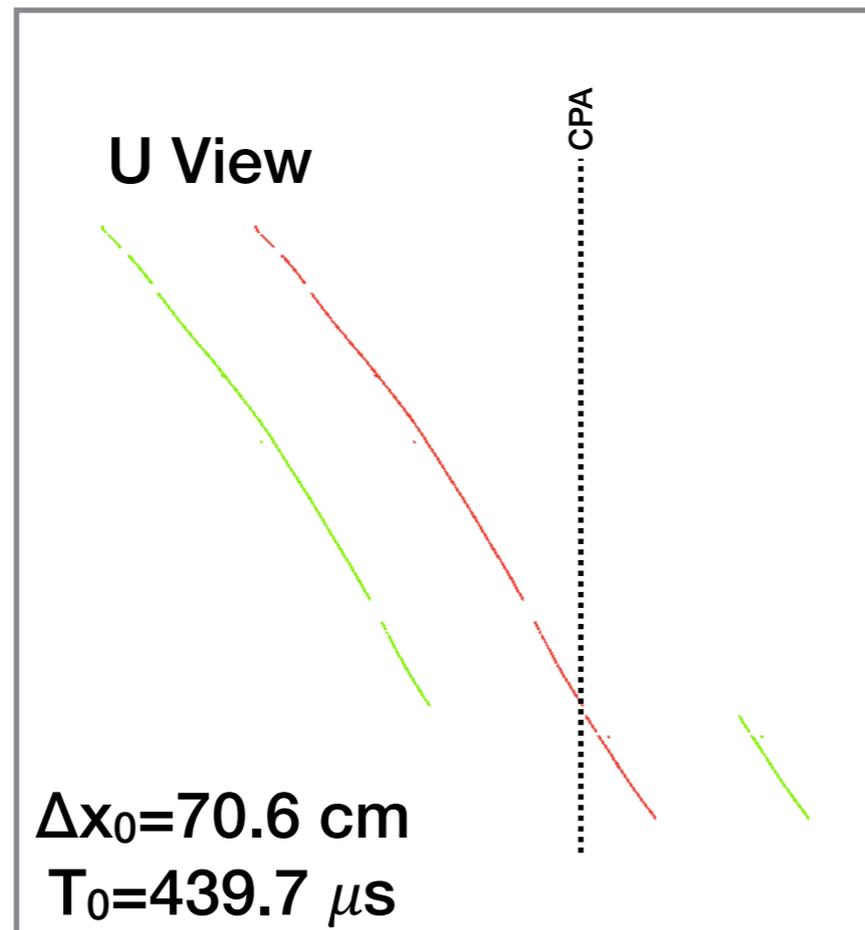

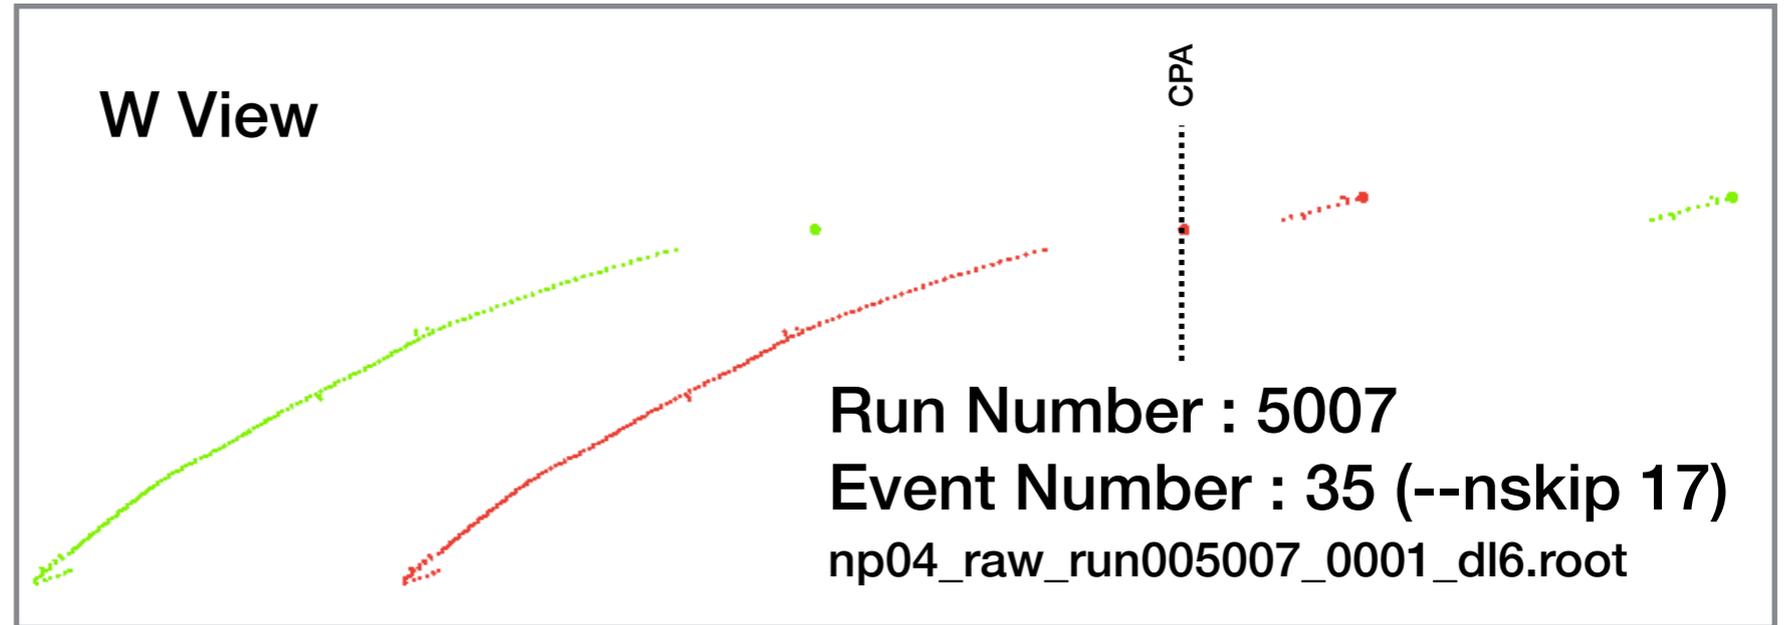

Run Number : 5007

Event Number : 1

np04_raw_run005007_0001_dl6.root

- Nice example of a track affected by space charge (curvature of track, particularly visible in W view) that is still stitched.
- Of course more detailed studies are needed to determine how robust this process is, but first steps are very encouraging.

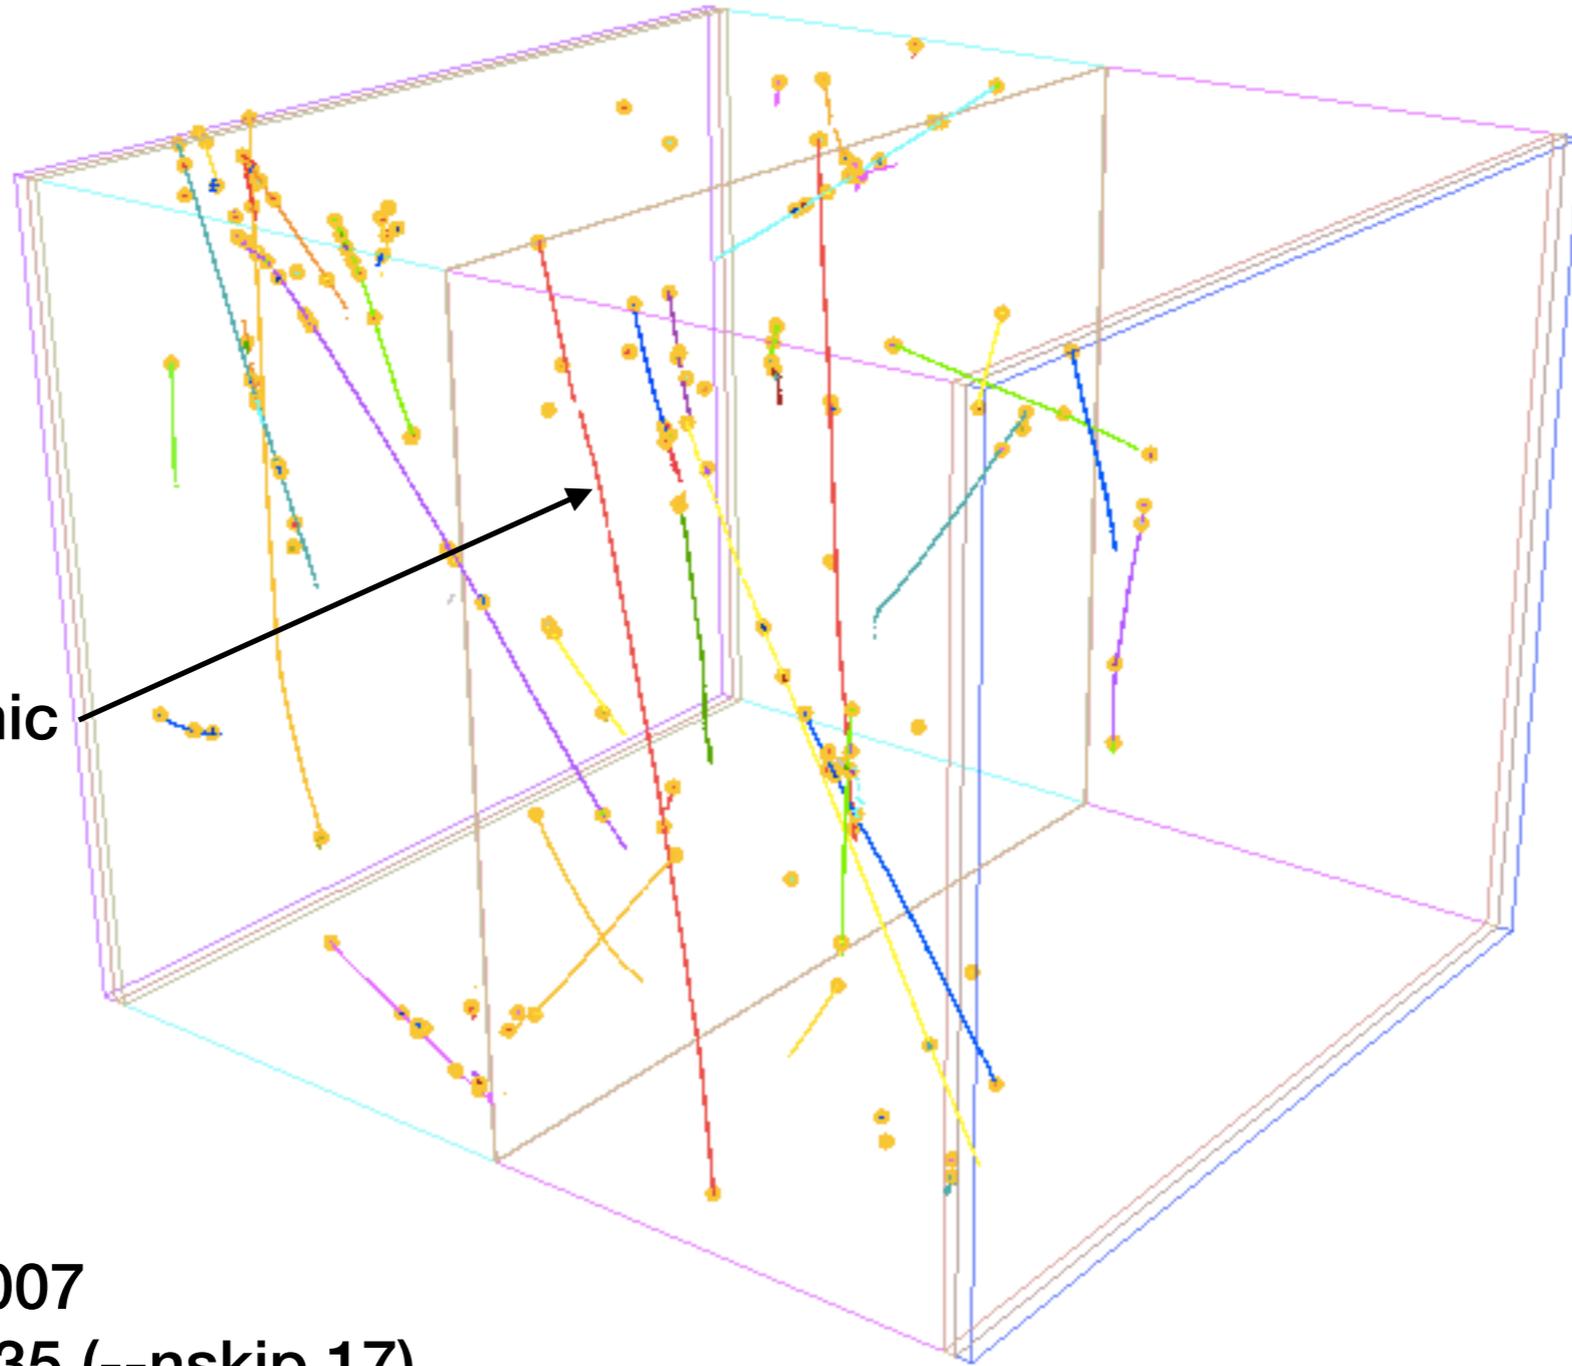

Not the Only Stitched Event

Stitched Cosmic

Run Number : 5007

Event Number : 35 (--nskip 17)

np04_raw_run005007_0001_dl6.root

- The purity of the ProtoDUNE-SP detector is good now that we can reconstruct cosmic rays passing through the cathode.
- Stitching in Pandora seems to be working well on data.
- Results look good (by eye) so far for the events that have been examined.
- anab::T0 objects are being produced using the default setup.

Thanks to everyone working on ProtoDUNE-SP who have helped to get such high quality data so quickly!

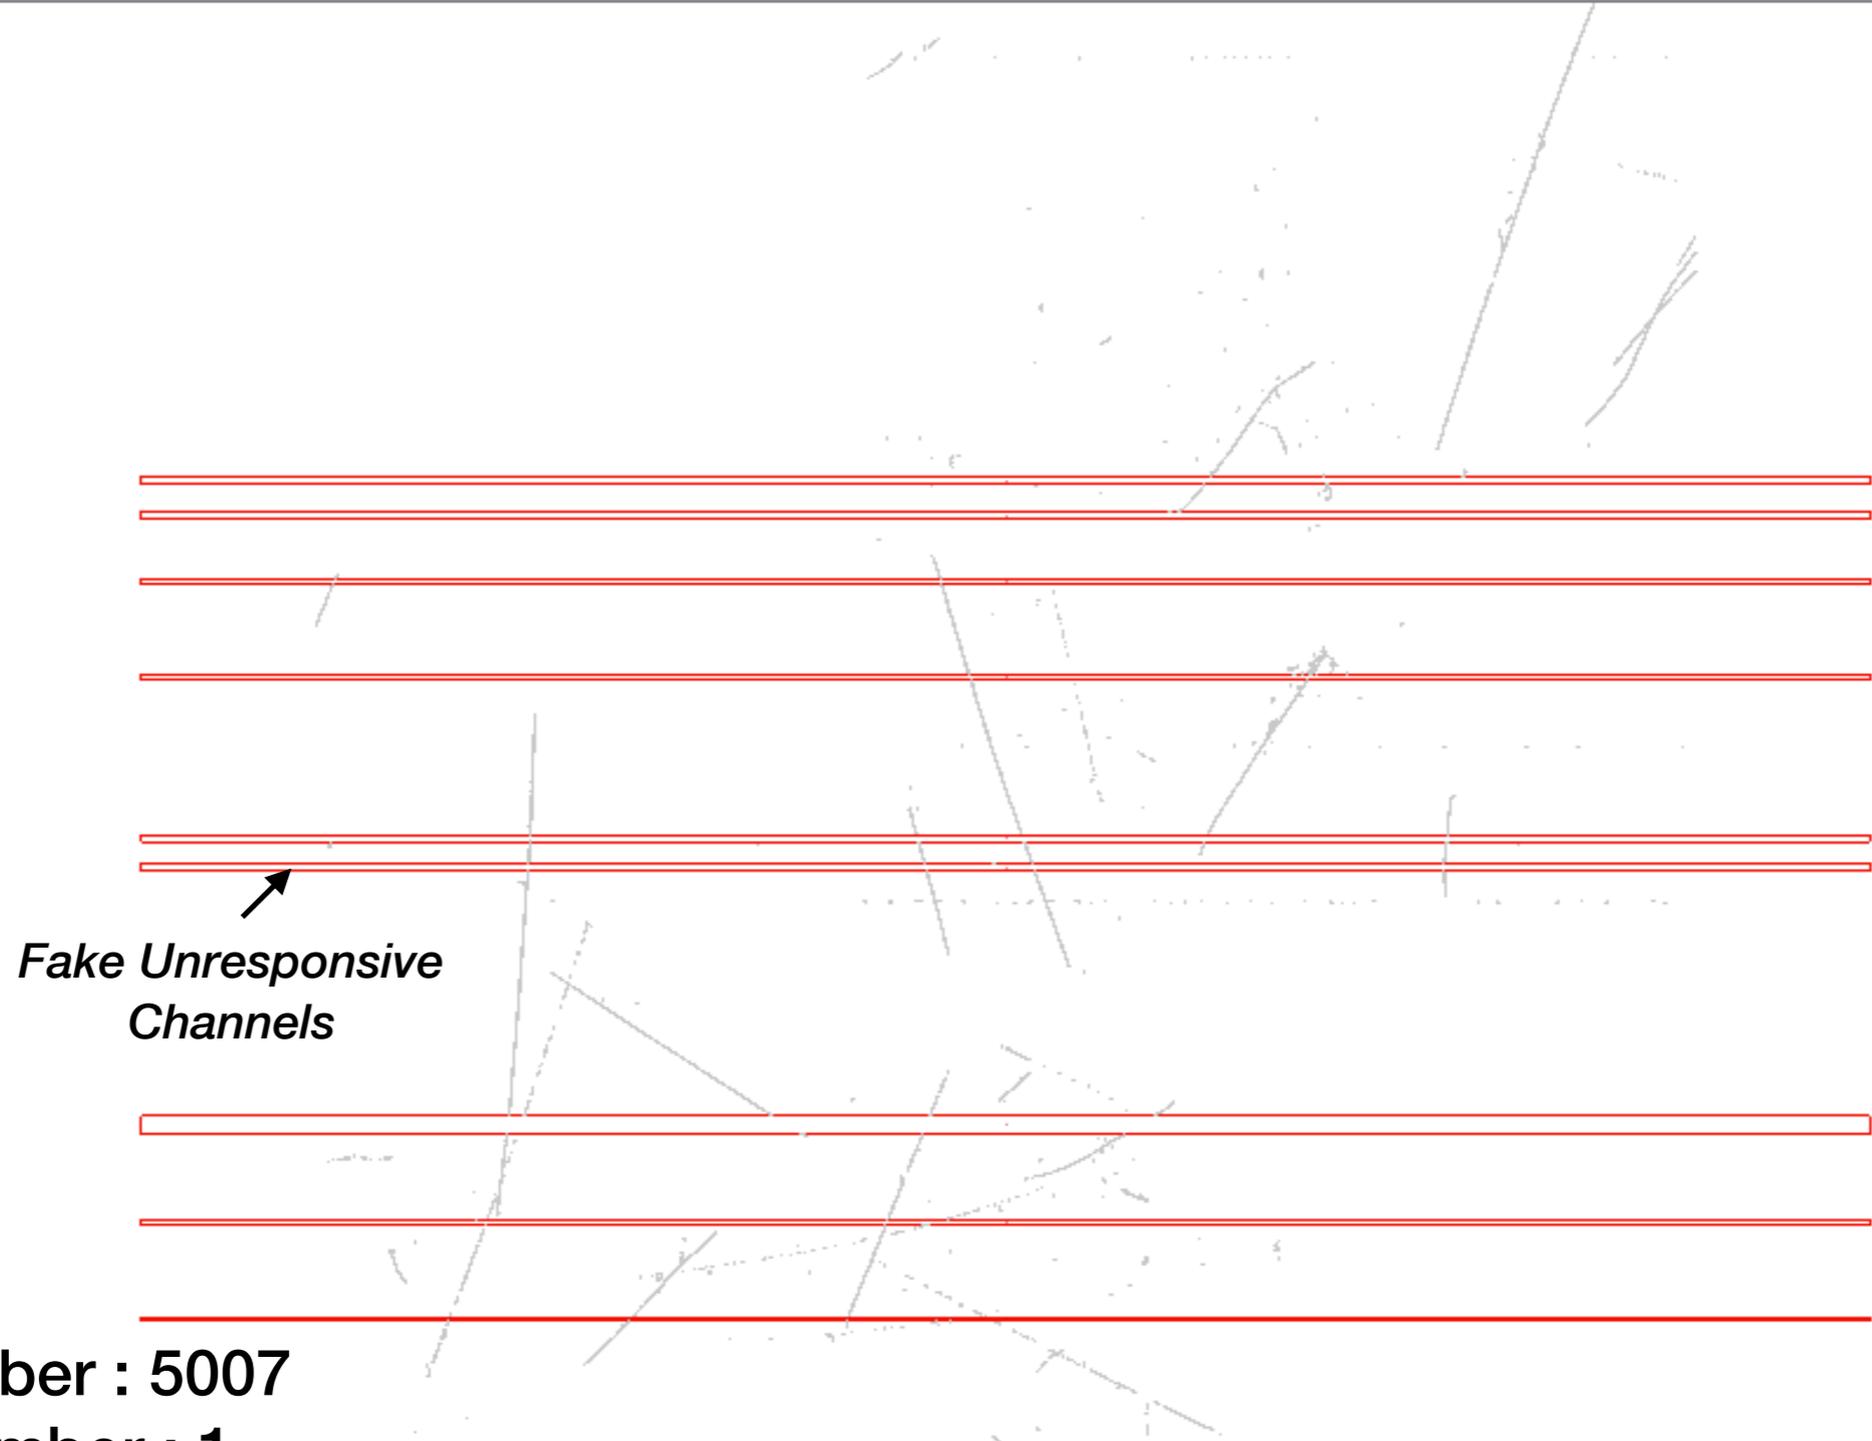

Thank you for your attention. Questions?

Not the Only Stitched Event

- There was a second stitched event in the curved track example.
